

14 **Lumenal** LED specialist is just a year old

Launched just last year, Lumenal designs and manufactures bespoke LED lighting for the retail, leisure, museum and exhibition display markets. The company specialises in the design and manufacture of linear luminaires and track systems for a variety of applications including shelf illumination, display case and graphics lighting.

Despite its young age, the company benefits from the 20 years' experience in the retail and exhibition display sectors of sister company, Unibox, a specialist manufacturer of extruded aluminium display systems. The company says it recognised the need for cost-effective, high quality LED luminaires, which offer optimum light output and longevity as well as energy efficiency and from this ethos Lumenal was born.

The company's products are manufactured in the UK using Cree LEDs with tight bin tolerances and metal clad PCBs, which offer the optimum level of light output, colour consistency and energy efficiency for the intended application.

Nick Wraith

And Lumenal's reputation led to it being selected for a collaboration with renowned British designer Tom Dixon for the lighting design of his debut Tom Dixon London shop. The company has also been involved with multiple major roll outs with leading UK retailers, based on its flexibility in both design and manufacture within very tight lead times.
